📋 CAREER OBJECTIVE

Final-year CSE student with strong foundations in Machine Learning, Python, and AI-driven automation. Experienced in applying AI fluency to build data pipelines, testing frameworks, and automation tools that improve operational efficiency and reporting accuracy, through internships and academic projects.

🎓 EDUCATION

B N M Institute of Technology, B.E. (2023-2027)
CGPA - **9.73**

Jain PU College, SENIOR SECONDARY(XII) (2021-2023)
Percentage - **94.66%**

KENDRIYA VIDYALAYA, SECONDARY(X) (2011-2021)
Percentage - **95.5%**

🏆 ACHIEVEMENTS

Published Indian Patent - FlashRescue Smart-City Disaster Response Platform, Indian Patent Office

Second Prize - K-GIS 2.0 State-Level Exhibition, Awarded by Karnataka State Remote Sensing Applications Centre (KSRSAC) with a cash prize of INR 50,000.

Best Elevator Pitch - NEC's Eureka, ED-Cell-BNMIT | E-Cell, IIT Bombay

2nd Runner-up – State-Level Project Competition 2025, Bangalore Institute of Technology (BIT)

📁 PROJECTS

FlashRescue – Smart-City Disaster Response Platform

- Architected a 5-layer microservices disaster-response system (IoT → MQTT → AI → Fusion → Dashboard) with a 3-person team, integrating 5 ML models (Vision Transformer, fire/smoke detection CNN, ResNet-50, Whisper ASR, bilingual disaster-text classifier) for multimodal triage across GPS, image, video, and voice input.
- Implemented trust-scored sensor-citizen data fusion and A* hazard-aware evacuation routing achieving sub-500ms alert latency and sub-200ms route computation; peer-reviewed paper presented at ICSDSA 2026 (SCOPUS-indexed Springer conference).

AURA – Adaptive Urban Risk Analyzer for Crowd Management

- Built a real-time crowd-monitoring pipeline (OpenCV MOG2 + Farneback optical flow) processing live video at 25–30 FPS across a 3-module architecture (video analytics, Python risk engine, React/Express dashboard).
- Engineered 5 proprietary risk metrics (Risk Score, Crowd Pressure Index, Exit Load Balance Score, Panic Detection, Huddle Detection) feeding a multi-metric safety-cost function for hazard-aware evacuation routing.

IntelliCheck AI – AI Integrity & Plagiarism Detection Platform

- Implemented a RAG + FAISS pipeline for semantic plagiarism detection and document-integrity verification, deployed via FastAPI.
- Containerized the service with Docker and built a GitHub Actions CI/CD pipeline for automated builds and deployment.

🏠 TECHNICAL PROGRAMS & PROFESSIONAL DEVELOPMENT

ACM India Winter School on Edge AI - IISc Bengaluru, Selected Participant(National 8-day program)

- Completed hands-on training in Edge AI, TinyML, Federated Learning, model optimization and deployment.

Samsung Innovation Campus, Student Trainee

- Completed industry-focused training in IoT systems, embedded programming, and sensor integration.

BNMIT Super 60 Leadership Academy, Student Member

- Chosen for a mentor-led leadership and professional development program.

💼 INTERNSHIPS

Edge AI Intern (07/26 – Present), WG Tech Solutions Pvt. Ltd.

- Led R&D generalizing an open-set defect detection pipeline across product lines, benchmarking a new single-model detection approach against the existing 9-model system with matching accuracy and ~3x faster inference; root-caused a false-alarm issue via leave-one-panel-out testing, isolating it to training data volume and reporting a concrete fix to the team.
- Built a manifest-driven test orchestration framework with automated HTML/JSON reporting and dependency tracking, improving visibility into test execution status and validation.
- Engineered a YOLOv8 animal-detection pipeline (0.817 precision / 0.701 recall / 0.752 mAP50) on a ~76K-image dataset, fixing a validation blind spot with a capped negative-to-positive ratio and ByteTrack temporal confirmation.

AI Engineer Intern (03/26 - 07/26), Kazunov 1AI Pvt. Ltd.

- Developed a document fraud-detection system combining OCR text extraction with OpenCV-based tamper analysis, reaching 92% accuracy on PDFs and 88% on images to flag manipulated documents ahead of manual verification.
- Replaced a synchronous document-processing bottleneck with an AWS SQS-backed asynchronous queue, improving operational efficiency by decoupling request intake from downstream verification.

Web Development Intern (06/25 - 11/25),

Sankhyatraya Science and Research Association (SSRA)

- Delivered and deployed the organization's production web application end to end, including DNS configuration and SSL provisioning.

🧠 SKILLS

AI Tools & Fluency

ChatGPT/Claude/prompt engineering for workflow automation, data analysis with Pandas/NumPy

Test Automation & CI/CD

Pytest, DAG-based orchestration, unittest.mock, MagicMock, GitHub Actions, Docker, Jenkins

Backend & APIs

FastAPI, Flask, REST APIs, WebSocket, MongoDB, PostgreSQL, Redis

Machine Learning & Computer Vision

YOLOv8, TensorFlow, OpenCV, ByteTrack, CNNs, Transfer Learning

Generative AI & LLM Systems

RAG, FAISS, Hugging Face Transformers, Prompt Engineering,

Programming Languages

Java, Python, C, SQL

Frontend Technologies

React, Next.js, JavaScript, HTML5, CSS3, Bootstrap, Tailwind CSS

📚 COURSES

Artificial Intelligence Fundamentals, IBM Skillsbuild

Introduction To Internet Of Things, NPTEL (Top 2% of learners)

Foundations of Deep Learning: Concepts and Applications, NPTEL(Score: 78%-Elite Certificate)
